solvent accessibility: intermediate vs buried
side-chain chemistry: hydrophobic vs positive
contact density: low vs high
side-chain chemistry: hydrophobic vs negative
side-chain chemistry: hydrophobic vs polar
contact density: low vs medium

−log₁₀ p, per-gene paired Wilcoxon (square-root scale)
−log₁₀ p, pooled Mann-Whitney over all residues (square-root scale)
per-gene p < 0.05
per-gene p ≥ 0.05
pooled p = per-gene p
