
Kidney Human+Mouse
ρ = 0.63, n = 9,042 genes
dark: difference passes the seed-noise test
430 higher
803 lower
FKBP5
ARF5
PPP2CB
MARK2
TERF2IP
Δα, per-gene gate (rank z)
Δα, protein-feature gate (rank z)
(a)
one seed
one seed
reliability of the difference (band: null)
ρ between the two gates
genes called, % lower | higher
(b)
ρ with the mean of the 15 nearest ESM-2 neighbors (given expression, detection, π, τ, detection gap)
Δα, protein-feature gate
Δα, per-gene gate
Δα, protein-feature gate, against the neighbors' Δα, per-gene gate, given the gene's own
random neighbors, 97.5th percentile (Δα, per-gene gate)
(c)
partial ρ (difference, covariate)
expression level
detection
|S_g|, protein-feature gate
|S_g|, per-gene gate
protein identity π
cell-type specificity τ
detection gap
joint R²
(d)
