human + monkey (liver) vs human + macaque (testis)
mitochondrially encoded genes
Spearman ρ = -0.002, n = 8,366
sign differs in 51% of genes
(expected if unrelated: 50%)
Δα in testis (raw prior, centred)
Δα in liver (raw prior, centred)
human + mouse, liver vs testis
Spearman ρ = -0.260, n = 8,233
sign differs in 60% of genes
(expected if unrelated: 50%)
Δα in liver (raw prior, centred)
