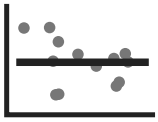
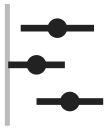
Applications of the readouts



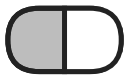
A separate axis
beside protein identity and dN/dS

Genes, programs, cell types
above or below the protein prior

Eight tissues, one reading
liver, testis, bone marrow, kidney,
islet, eye, cortex, lung



Independent tests
held-out species, atlases, benchmark



Disease genes, drug targets
placed in healthy tissue (exploratory)

Protein-space atlas
deployment over ESM-2 neighborhoods;
residue attribution (exploratory)

Ortholog audits
mapping and annotation gaps
