all disease genes (MGI): 936 of 4035 genes modelled
organ-matched (MGI): 597 of 2494 genes modelled
IMPC Phenodigm: 1703 of 3143 genes modelled
8×10^{-1}
9×10^{-1}
10^{0}
odds ratio per SD that the mouse mutant models the same human disease (given covariates)
Δα, canonical gate
Δα, per-gene gate
S_g
pseudobulk profile corr.
protein identity π
