Count evidence S_g
Pseudobulk profile correlation
$\Delta\alpha$, per-gene gate
Detection gap (no model)
Cortex: Hodge divergent (top 3%) vs shared markers (n 226)
Cortex*: Bakken human-only vs conserved markers (n 378)
Kidney: He glomerular specific vs conserved (n 64)
Kidney: Kim human-enriched vs conserved (n 262)
Islet: Benner human-enriched vs common (n 209)
Islet: Benner mouse-enriched vs common (n 234)
Testis: Shami unique vs in-phase (H-M) (n 1007)
Testis: Shami phase-shifted vs in-phase (H-M) (n 1000)
Testis: Shami unique vs in-phase (H-Q) (n 586)
Liver: Aizarani non-conserved vs conserved zonation (n 119)
Marrow*: primate-enriched vs conserved (n 350)
Marrow*: primate-depleted vs conserved (n 261)
Lung*: primate-depleted vs conserved (n 208)
Lung*: Travaglini DE vs conserved (n 335)

Stratified AUROC, published divergent genes vs the same paper's conserved genes
(< 0.5: divergent placed below conserved; * same data as the cohort)
