§L.M.4 Pooled-vs-per-gene significance for the six 'what doesn't drive attention' candidates · Pooled bars often reach significance; per-gene bars usually collapse
IDR (pLDDT < 50) vs ordered
Cliff's δ = +0.162
p = 9.6e-57 ***
p = 0.622 ns
contact density: low vs high
Cliff's δ = +0.054
p = 0.004 **
p = 0.013 *
aromatic FYW vs rest
Cliff's δ = +0.040
p = 0.240 ns
p = 0.197 ns
glycine G vs rest
Cliff's δ = +0.050
p = 1.4e-04 ***
p = 0.302 ns
proline P vs rest
Cliff's δ = +0.085
p = 2.4e-11 ***
p = 0.404 ns
conservation entropy: high vs low
Cliff's δ = +0.065
p = 1.8e-14 ***
p = 0.174 ns
−log10(p)
pooled MWU
per-gene paired Wilcoxon
